

Class Description:

Coil, Scroll & Pivot Chain

Combine technique and design in the construction of a movable, sultry wire chain bracelet. Wind decorative coils and jump rings by hand and see how it's done with different coiling tools. Cut great jump rings, make consistent components, and move it all around with a pivot crossbar. Learn how to twist wires together for coils or rings. A great class to fine tune wirework and design skills.

Prerequisite: *Beginning wirework class, familiarity with basic wire work, and/or practice.*

Class Running Time: *6 hours*

Barb will discuss and demonstrate using several different coiling tools. Students do not need their own coilers for class, but should bring them if they have them.
