

Class Description:
Vertebraecelet

Turn the world of the multi-holed spacer on it's ear — or actually, it's side! Rethink your findings, bend some wire, and make a smooth moving bracelet that bends like a snake and looks like a million bucks. Explore basic wirework, design, composition, and learn a bit of engineering wizardry.

Prerequisite: completion of a basic wire class and practice!

Class Running Time: 3 hours
